William Tarnow-Mordi is Professor of Neonatal Medicine and Director of Neonatal and Perinatal Trials at the University of Sydney's Clinical Trials Centre. Since 2000, he and his colleagues have worked with more than 300 investigators across 28 countries on trials to improve maternal and newborn care. This work in close collaboration with Professor AnnaLene Seidler and her evidence synthesis team has helped establish that delaying cord clamping in very preterm babies reduces the relative risk of mortality by around 30%, shaping international guidelines. William is now co-leading Safer Birth at Term, an emerging international collaboration aiming to accelerate the generation and implementation of reliable evidence through large, streamlined clinical trials, developed in partnership with women, families and clinicians.

William Odita Tarnow-Mordi
Professor of Neonatal Medicine
NHMRC Leadership Fellow L3
Co-lead, Neonatal and Perinatal Trials Group
Sydney Clinical Trials Centre,
Faculty of Medicine and Health
